PROFESSIONAL SUMMARY

Full Stack Developer focused on Python and Django. I build REST APIs with Django REST Framework, user interfaces with Vue 3 (Pinia, Tailwind CSS), and reproducible environments with Docker and PostgreSQL. I am currently building Legatio AI (an AI-powered negotiation platform), DocuMind Core (AI-powered repository analysis) and an e-commerce platform with payment integration (MercadoPago). I learn by building real projects with AI-assisted development. Experience working in teams with agile methodologies (Scrum, Kanban). Looking to join a backend or full stack Python development team.

TECHNICAL SKILLS

Backend: Python, Django, Django REST Framework (DRF), REST APIs, authentication and permissions

Frontend: Vue 3, Pinia, Tailwind CSS, JavaScript, HTML, CSS, Bootstrap

Databases: PostgreSQL, MySQL

DevOps & Tools: Docker, Docker Compose, Git, GitHub, CI/CD, Postman

Testing & Code Quality: pytest, mypy, ruff, pre-commit

Methodologies: Scrum, Kanban, Trello

Languages: Spanish (native), English: Intermediate (B1) – reading, writing and comprehension; basic spoken

SOFTWARE DEVELOPMENT EXPERIENCE

Legatio AI – AI-powered negotiation platform 2026 – Present

Full Stack Developer (personal project)

Stack: Django 5, DRF, Django Channels, Celery, Redis, PostgreSQL 16, Docker Compose

- Designed the backend architecture, documented in the repository: a language model proposes actions and a deterministic policy engine decides (allow, deny or require approval).
- Designed an audit service that records every system decision to ensure traceability.
- Set up reproducible development and production environments with Docker Compose, CI/CD and pre-commit (ruff).
- Repository: github.com/mocenslabs/legatio-ai

DocuMind Core – AI-powered repository analysis 2026 – Present

Full Stack Developer (personal project)

Stack: Python, hexagonal architecture, multi-provider AI integration

- Building an engine that analyzes repositories and generates documentation (README) with AI.
- Implemented deterministic language and framework detection to minimize false positives and avoid unnecessary model token spend.
- Designed a layered architecture (domain, application, infrastructure, presentation) that is independent of the AI provider.
- Repository: github.com/mocenslabs/documind-core

E-commerce Platform 2026 – Present

Full Stack Developer (personal project)

Stack: Django 6, DRF, Vue 3, Pinia, Tailwind CSS, MercadoPago

- Building the backend with Django 6 and DRF, and the frontend with Vue 3, Pinia and Tailwind CSS.
- Integrated real payments with MercadoPago.
- Ran a full project audit: fixed security (hardening) and architecture issues, and completed the backend.

EDUCATION & COURSES

Python 101 for Data Science – Cognitive Class (IBM) Oct 2024 – Nov 2024

Oracle Next Education – Alura Latam Aug 2022 – May 2023

Argentina Programa – Secretariat of Knowledge, Argentina Jul 2021 – Sep 2023
